SBS

Kühltechnik GmbH

Always the perfect solution.

DEVELOPMENT AND STRENGTH

We strive to make good things even better!

Since it was established in 1997, SBS Kühltechnik GmbH has developed into an innovative, high-performance company. The company's core competence involves the development and manufacture of cold storage and deep-freeze rooms in all dimensions. It specialises in the individual planning and production of welded cells and chambers for environmental simulation applications.

- Cold storage and deep-freeze rooms
- Temperature and climate chambers
- Special chambers

INNOVATION AND QUALITY

Speciality is our standard

As a growth-oriented, medium-sized company with flat hierarchies and structures enabling quick decisions, SBS Kühltechnik attaches great importance to independent workstyles and employees' constant willingness to learn. For this reason, flexibility, innovative drive and versatility are characteristic of the constant further development of products and processes.

Often wanted – for us a standard feature: **Hygiene +**

With our unique SBS standard Hygiene +, the ceiling and floor elements of chambers are mounted internally. This means that no traverse joints are visible from the outside. The advantages: easy cleaning, easy-care and appealing surfaces.

Completely hygienic

As an option, we also deliver our cold storage rooms with a fillet and antibacterial coating. This rounded transition from the floor element to the wall panels further optimises the hygiene factor.

DEDICATION AND SERVICE

Our reliability makes all the difference

SBS Kühltechnik will not leave you out in the cold. We are passionately committed to ensuring that your customers hold you in high esteem. And we want to make your life as easy as possible. For this reason, we are speedy, punctual and reliable. Our service has nothing to do with coincidence – it is strongly anchored in our hearts and minds: we live up to our service ethos.

Which is why we are passionate about providing advice: always in person, on site if you like. Our team is made up of experts with comprehensive expertise who also think outside the box, enabling the perfect solution to be found for your requirements. They plan, organise and coordinate, and are always there for you to offer help and advice.

Service plus

Our strengths – your advantages:

- + Consultation by specialists
- + 80 % individual customised solutions
- + Quick quotations (usually one hour after receiving an enquiry)
- + Short delivery times
- + Keen adherence to schedule
- + Absolutely reliable
- + Service with a guaranteed feel-good factor

Our company in figures

More important than any figures

Many aspects cannot be expressed in figures – but are vitally important when it comes to achieving optimum results and inspiring customers: a good working atmosphere, dedicated and motivated employees, and a shared enthusiasm for top quality.

Chambers per year

As an owner-managed company with strong roots in the region, we are a reliable and fair employer to our staff, offering secure prospects. Which is another reason why they are passionately committed to always finding the ideal solution for all kinds of requirements.

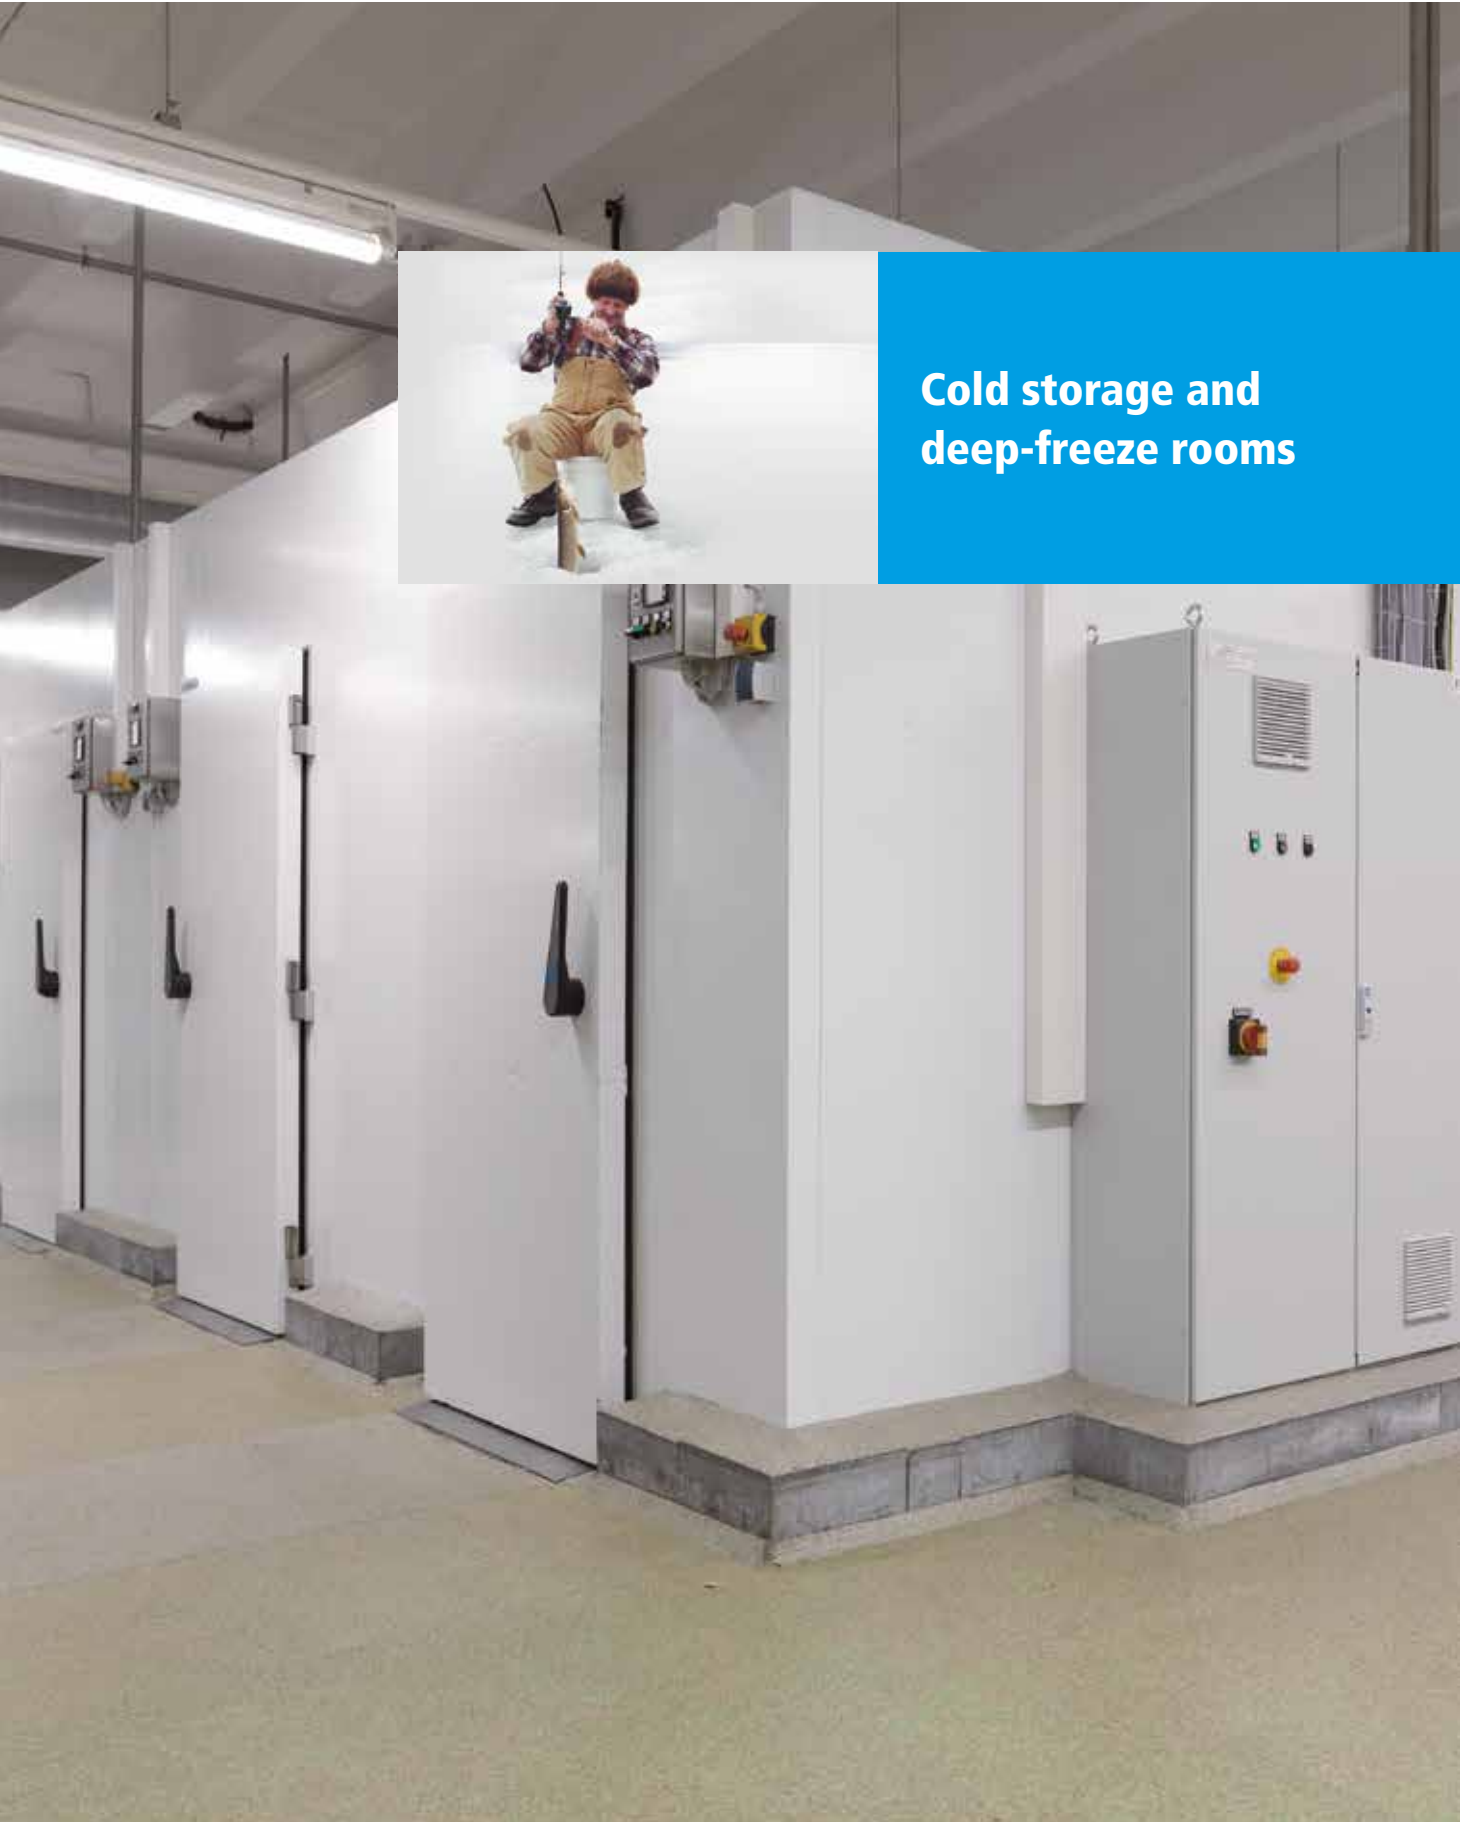

EXPERIENCE AND PERFORMANCE

Cold storage and deep-freeze rooms in all sizes

SBS Kühltechnik produces cold storage and deep-freeze rooms in any desired size and execution. Thanks to our individual planning and production, which specialises in customised sizes, we are able to cater to your individual requirements very flexibly.

Depending on the temperature demand and function, we select the ideal insulation thickness and offer numerous customised solutions, such as an ultra-flat floor structure with foamed-in vacuum plates when systems need to be installed in buildings where difficult conditions prevail. You benefit from our long experience in environmental simulation and in special chamber construction.

Cold storage and deep-freeze rooms

KNOW-HOW AND PRECISION

We specialise in temperature and climate chambers

From the very beginning, SBS Kühltechnik was heavily engaged in climate and environmental simulation, and is now one of the leading specialists in this area. Which comes as no surprise. Because there are no standards in this area, every task is different: sophisticated, complex, challenging. Here we can truly make full use of our strengths. Whether in research or development, production or quality assurance – we create perfect conditions for environmental simulation. Challenge us with your next project!

Temperature and climate chambers

COMPETENCE AND SOLUTIONS

Intelligently planned special chambers for specific applications

We would like to take on your problems: whether shock freezer, fermentation or test chambers; whether spiral freezers or individual machine casing – SBS Kühltechnik will develop the best solution for you. For any area of application, for any industry. The features are geared fully to your requirements and wishes.

In this connection, all kinds of variations are possible, such as different coatings made of aluminium, stainless steel or varnished thin sheet in an array of RAL colours and sheet thicknesses; expanded plasterboard, wooden or plastic panels; insulation from 60 mm to 200 mm in a variety of dimensions. SBS Kühltechnik provides advice on how to realise your projects, ideally at an early stage of the planning process.

RECOGNITION AND CONVICTION

Those who know us are convinced by our performance!

Once a customer has experienced our outstanding services, we can be sure of their return – virtually always. We take this as an indication that we are doing a lot right, and that our customers appreciate our commitment to achieving top quality, providing excellent service, and ensuring scheduling/delivery reliability. This, of course, delights us, and acts as an incentive to make good things just that little bit better.

Customer quote:

“SBS Kühltechnik has exceeded our expectations by far. The deep-freeze rooms were installed quickly, neatly and competently over the weekend. The precision of the SBS staff showed the extent to which they master their trade. Stability and the tightness of the floors are particularly important, especially for the demands we place on our food production and cooling. Five “frozen stars” for your work – Thank you!”

Wolf Butterback, Fürth
